## SUMMARY

Enterprise Software Engineer specializing in the architecture, analysis, and development of complex business-critical systems — with deep production expertise in HRMS, Payroll, Workflow Automation, and Multi-Tenant SaaS platforms. Proven ability to dissect intricate business logic, model enterprise workflows, and translate nuanced operational requirements into scalable, maintainable backend systems. Experienced delivering production systems serving 500+ active users in demanding Gulf-market environments, using ASP.NET Core 8, Microservices, gRPC, and distributed database strategies. Recognized for strong analytical depth, clean architecture practices, and the ability to work across complex, interconnected enterprise modules — from payroll computation logic to multi-level approval workflows.

## CORE COMPETENCIES

- |                                    |                                      |                                   |
|------------------------------------|--------------------------------------|-----------------------------------|
| ◆ Enterprise Systems Architecture  | ◆ Business Logic Analysis & Modeling | ◆ HRMS & Payroll Domain Expertise |
| ◆ Microservices & gRPC Integration | ◆ Multi-Tenant SaaS Architecture     | ◆ Production System Optimization  |
| ◆ Root Cause Analysis & Debugging  | ◆ Requirements Engineering           | ◆ Legacy System Modernization     |

## TECHNICAL SKILLS

- |                                 |                                                                                                            |
|---------------------------------|------------------------------------------------------------------------------------------------------------|
| <b>Backend &amp; Frameworks</b> | C#, ASP.NET Core 8, .NET 8, Web API, Microservices, gRPC, REST APIs                                        |
| <b>Architecture Patterns</b>    | Clean Architecture, Modular Architecture, Repository Pattern, Dependency Injection                         |
| <b>Data &amp; Persistence</b>   | SQL Server, MySQL, Entity Framework Core, Dapper, LINQ, Query Optimization                                 |
| <b>Security &amp; APIs</b>      | JWT Authentication, Swagger/OpenAPI, Async Programming, Validation & Error Handling                        |
| <b>DevOps &amp; Tools</b>       | Docker, CI/CD Pipelines, Git                                                                               |
| <b>Frontend Integration</b>     | React.js, TypeScript                                                                                       |
| <b>Domain Expertise</b>         | HRMS, Payroll Systems, Leave & Attendance, Workflow & Approval Engines, ERP Integration, Multi-Tenant SaaS |

## PROFESSIONAL EXPERIENCE

---

### Software Engineer — System Analysis Focus

March 2025 - Present

Al-Falak Soft (Saudi Arabia) | Sana'a, Yemen

- Led system analysis and requirements engineering for a multi-tenant HRMS platform, translating complex organizational workflows into precise technical specifications guiding architecture and cross-module development.
- Conducted deep analysis of enterprise business logic across HR operations, approval hierarchies, leave entitlement rules, and self-service workflows — ensuring full alignment between business requirements and technical implementation.
- Produced structured technical documentation and workflow maps for Leave Management, Advances & Loans, Self-Service, and multi-level Approval modules.
- Architected and built a full end-to-end multi-tenant HRMS from scratch — covering Recruitment, Payroll, Attendance, Organizational Structure, HR Services, Self-Service Portal, Administration & Permissions, and Document Workflow — owning the entire 3-month analysis phase solo before leading backend development.
- Integrated Keycloak for identity and access management, configuring multi-tenant SSO and fine-grained role-based authorization across all HRMS modules.
- Transitioned to full backend ownership after leading a 2-month React frontend build phase, simultaneously guiding and mentoring the frontend team on architecture decisions and implementation patterns.

### Software Engineer — Backend Specialist

March 2024 – March 2025

Data Trans Company (Subsidiary of Obeikan Digital Solutions, Saudi Arabia) | Sana'a, Yemen

- Designed and delivered enterprise-grade HRMS modules (HR Core, Payroll Engine, Self-Service, Compliance, Talent Acquisition) using ASP.NET Core 8, supporting 500+ active users across business-critical production operations for the Saudi market.
- Architected Microservices solutions for Knowledge Management, Rewards & Recognition, and Organizational Performance using gRPC for high-performance, reliable inter-service communication.
- Engineered secure, scalable RESTful APIs enabling seamless integration across distributed services and external enterprise systems with robust error handling and input validation.
- Optimized query performance and data processing efficiency across SQL Server, MySQL, and MongoDB, improving system responsiveness in high-load production scenarios.
- Mentored and onboarded 4 junior developers, improving team delivery velocity and knowledge-sharing practices within a fast-paced production environment

### Freelance Backend Developer

January 2022 - January 2024

Various Projects

- Built the RYCAAD full-stack platform (CMS, event management, membership, automated notifications) for a cooperative organization, streamlining content workflows and communication operations.
- Designed a centralized Hall & Booking System with RESTful APIs for real-time facility availability tracking and reservation conflict management.
- Developed a Personal Tech Blog with role-based access control and optimized SQL Server queries for fast content delivery.

## Software Engineer — Student Management System

2021 – 2022

Educational Training Institute | Sana'a, Yemen

- Designed and developed a full Student Management System for a training institute, covering student enrollment, course scheduling, attendance tracking, progress reporting, and certification management.

## EDUCATION

---

Bachelor Degree in Computer Science

January 2019 - October 2022

University of Sana'a, Yemen

## CERTIFICATIONS

---

- Professional Certificate in Human Resources Management
- Foundations of Accounting & Financial Management
- Professional Certificate in Student Management System Development

## LANGUAGES

---
